

**Custom colors** for highlighting cells in Excel are available.

It works if you apply one of the **Standard Colors** in Excel (or you can click **More Colors** and select any of those, as long as it's not one of the Theme Colors).

The custom colors will be displayed the same way both on web and in the PDF.

Then, when you upload the Excel file in Macros, you need to enable the toggle below. This ensures that the existing files and pages using the old logic remain unaffected, and the new feature will only be used where necessary.

<>    I<sub>x</sub>    Paragraph

    $x^2$     

# Förvärv

De från och med räkenskap  
mellan koncernens affärson

Macro alias: **OxPE**

Tilläggsköpeskilling om 7 M  
förvärvades under år 2021.

## Excel till tabell

### Välj Excelfil

### Web fontstorlek px

### PDF fontstorlek px

### Automatisk bredd

☐ x

### Standard antal decimaler

### Worksheet Name

Disabled: Tables try to stay on a single page. Enabled: Tables can split across multiple pages, which prevents awkward layouts with large tables

☐ x

Use default colors for cell highlight (default: disabled toggle) OR take the color from the uploaded Excel file (enabled toggle)
